🗔 **b9611089.eero.online**    🕐 Pending Nameserver Update    ☆

Update the nameservers ⤢ at your registrar ⤢ to activate Cloudflare services for this domain.

This process makes Cloudflare your authoritative DNS provider ⤢, allowing your DNS queries and web traffic to be served from and protected by our global network. ⤢

> ⓘ In most cases, this process will not cause downtime, but you may skip this for now to double-check your DNS records and pre-configure other settings before activating (you can find these instructions again later on the Overview page).

1. **Log in to the domain registrar or reseller where you registered the parent domain**

Find your registrar on ICANN WHOIS ⤢

## 2. **Avoid DNS resolution issues caused by DNSSEC** ↗

Find the DNSSEC setting at your registrar ([per-provider instructions](#) ↗). If it is **on**, you have two options:

- [Turn DNSSEC off](#) ↗ at least 24 hours before updating your nameservers. *Most common*
- [Migrate your existing DNS zone without turning off DNSSEC.](#) ↗ *More advanced*

After your domain activates, we recommend [turning DNSSEC on](#) ↗ through Cloudflare.

## 3. **Update your nameservers**

Find the list of nameservers at your registrar. Add both of your assigned Cloudflare nameservers, remove any other nameservers, and save your changes.

*Your assigned Cloudflare nameservers:*

| | | |
|---|---|---|
| ☁ | `julian.ns.cloudflare.` | [Click to copy](#) |
| ☁ | `keira.ns.cloudflare.c` | [Click to copy](#) |

ⓘ **Registrars take up to 24 hours to process nameserver changes (quicker in most cases). We will email you when b9611089.eero.online is active on Cloudflare.**

While in this pending state ↗, Cloudflare will respond to DNS queries on your assigned nameservers.

Once activated, SSL/TLS, DDoS protection, caching, and other automatic optimizations will go live for proxied DNS records, along with any custom settings you pre-configure.

Learn more about pending domains ↗

Cloudflare will periodically check for nameserver updates.

Check nameservers now
